

John Greaves wants to tell you that he is... ...WORKING ON A CHAIN GANG

Manage your **value chain** more quickly,
effectively, and efficiently than ever.

WORKING ON A CHAIN GANG

Your very own Y2K

John Greaves “Doctor Blockchain”
RAIN in the Blockchain Economy

WORKING ON A CHAIN GANG

Blockchain has arrived and with it, another mass of data acquisition challenges

IIoT, when effectively enabled, has an ongoing and important role in a Blockchain program

The question is can your IIoT be your Chain Gang

Or do you need more work or better tools?

Let's find out.....

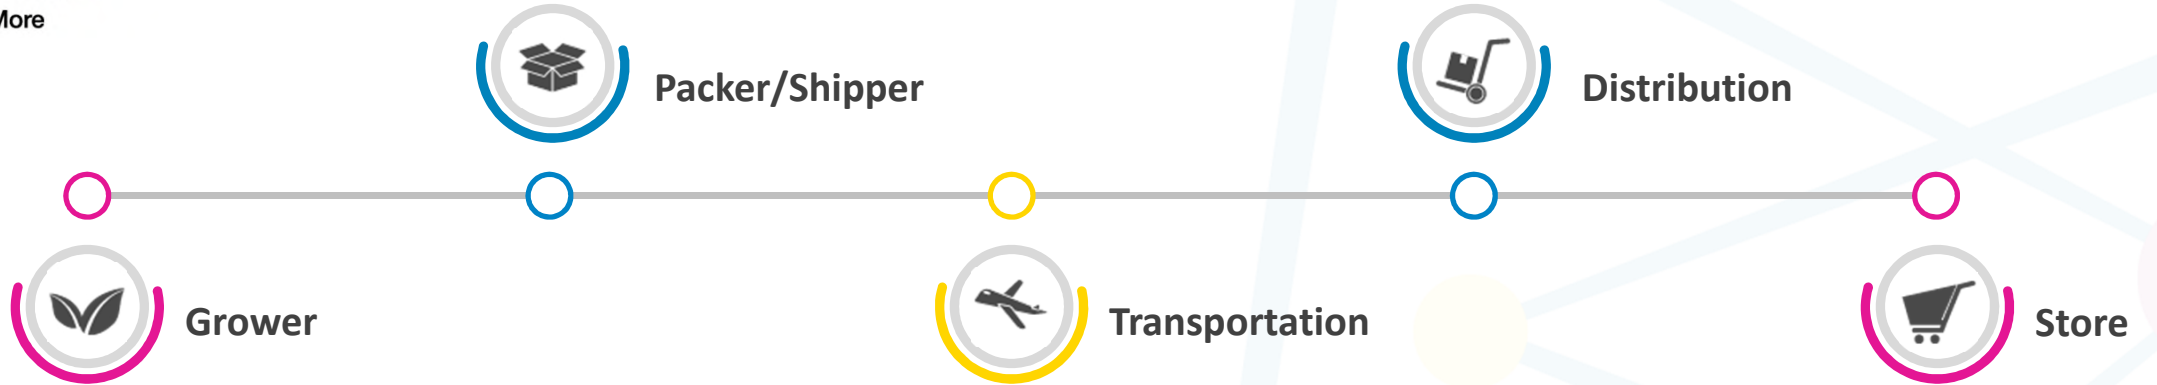

- IoT (2010) or IIoT
- Should not be a question!
- 3 years and moving on

- The Industrial Internet of Things (**IIoT**) is the use of Internet of Things (IoT) technologies in manufacturing
- In manufacturing specifically
- **IIoT** holds great potential for quality control, sustainable and green practices, supply chain traceability and overall supply chain efficiency **Gartner**

WHAT IS BLOCKCHAIN?

Blockchain Leveraging Common Components

BLOCKCHAIN IS ONLY FOR FINANCIAL TRANSACTIONS

True in 2010

Then reality, like Y2K, or the next generation cell phone sets in and you find yourself stranded

The most challenging side of Blockchain is the pace of implementation, of consideration

Industry bodies, standards bodies, regulators, corporations, SME and even a remote coffee plantation are on board.....NOW

- Blockchain is a physical event, generating proof positive that in agreeing the event a simultaneous transaction may advance
- Blockchain is not a technology. In itself it has no leg to stand on
- You must decide, **now**, with legitimate guidance, private or public?

CENTRALIZED vs. DISTRIBUTED vs. DECENTRALIZED

CENTRALIZED

- One database, one owner
- Not resilient to organizational failure
- Not resilient to technical failure

Airline Example

DISTRIBUTED

- Many database copies, one owner
- Resilient to technical failure
- Not resilient to organizational failure

Government Systems

DECENTRALIZED

- Many database copies, many owners, no one “master”
- Resilient to technical failure
- Resilient to organizational failure

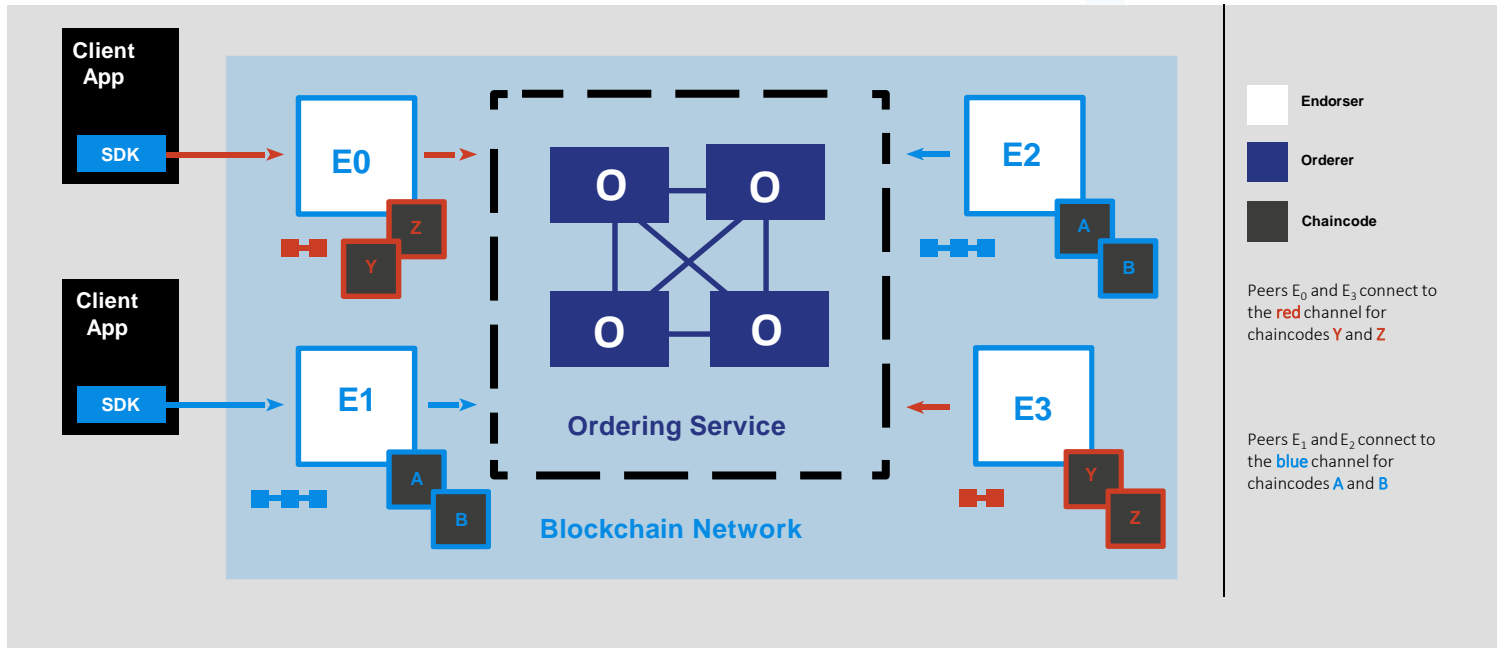

Common Sense

SILOS

Multi-Ledgering

Permissioned
Blockchain

OBJECTIVES

- Creating a vision – not a product. **Fulfillment** is the word.
- Goal is a stronger, more efficient, & sustainable Supply Chain
- Blockchain + GS1 standards = Scalable Traceability with RAIN
- Traceability → Transparency → Accountability → Responsibility

BLOCK CHAIN IS FOR REAL

- **Supply chain data transparency**
 - What data should be shared with consumers?
 - What data should be only shared with trading partners?
- **Private versus Public Blockchain networks**
 - Cost
 - Performance
 - Ability to select privacy levels
- **Benefits to each trading partner should be greater than the cost**
- **Regulators right to access to Blockchain data**

BLOCKCHAIN IS NOT FOR REAL

- PMA BLOCK CHAIN Task Force
- Walmart
- Kroger
- Wegman
- P & G
- Trimble Transportation

- IBM
- Deloitte
- Microsoft
- Google
- Accenture
- Lowry Chain

BLOCKCHAIN IS NOT FOR REAL

- RABID
- Registration Authority for Blockchain Identities.
- T shirts
- Adapted to improved Logo now show Rain pouring down on dogs head

- BRA
- Blockchain Registration Authority
- Simple
- Straightforward
- Uplifting

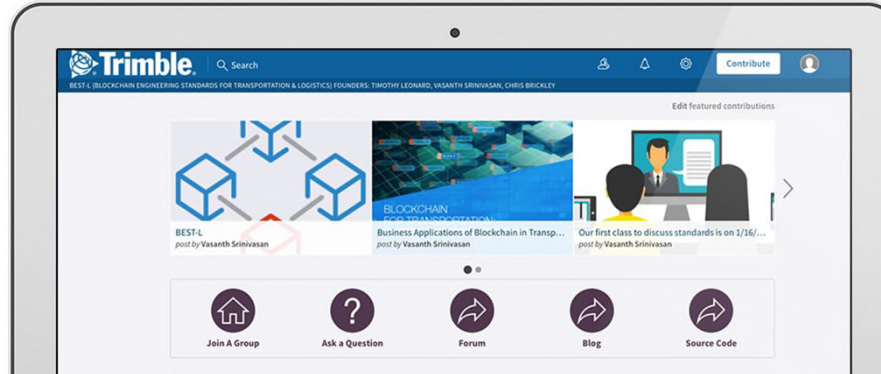

Alibaba, JD tackle China's fake goods problem with blockchain

IBM and Walmart Launch Blockchain-Based Food Safety Alliance for China

December 21, 2017, 02:07:17 PM EDT By Giulio Prisco, Distributed

Blockchain Engineering Standards for Transportation & Logistics

Several consortiums have formed in recent months to address the various business problems facing each industry. Some of them are outlined above. However, as a leading transportation technology provider, we feel that there isn't an organization to address the technical challenges associated in using Blockchain to solve transportation problems. Hence, a few of us have stepped forward and formed an association named BEST-L, which purely focuses on establishing open standards for the transportation and logistics industry.

The organization isn't restricted to TMW and its affiliates, but open to all technology enthusiasts. We invite business users, developers, architects, network administrators, executives, professors, college students, research staff, entrepreneurs and blog writers to join the organization and become a part of the Blockchain journey. As a first step, we have a web portal set up for everyone to collaborate and share ideas. There are also virtual classes to stimulate the collaboration.

\$70,000 a week

What blockchain technology trial in tomatoes could mean for produce industry

Intrigued by how blockchain was changing finance, an ex-banker at Wells Fargo & Co. and a former executive at Nasdaq Inc. began looking for other opportunities. They looked at applying the technology to insurance, law, even music. Then they hit on farming.

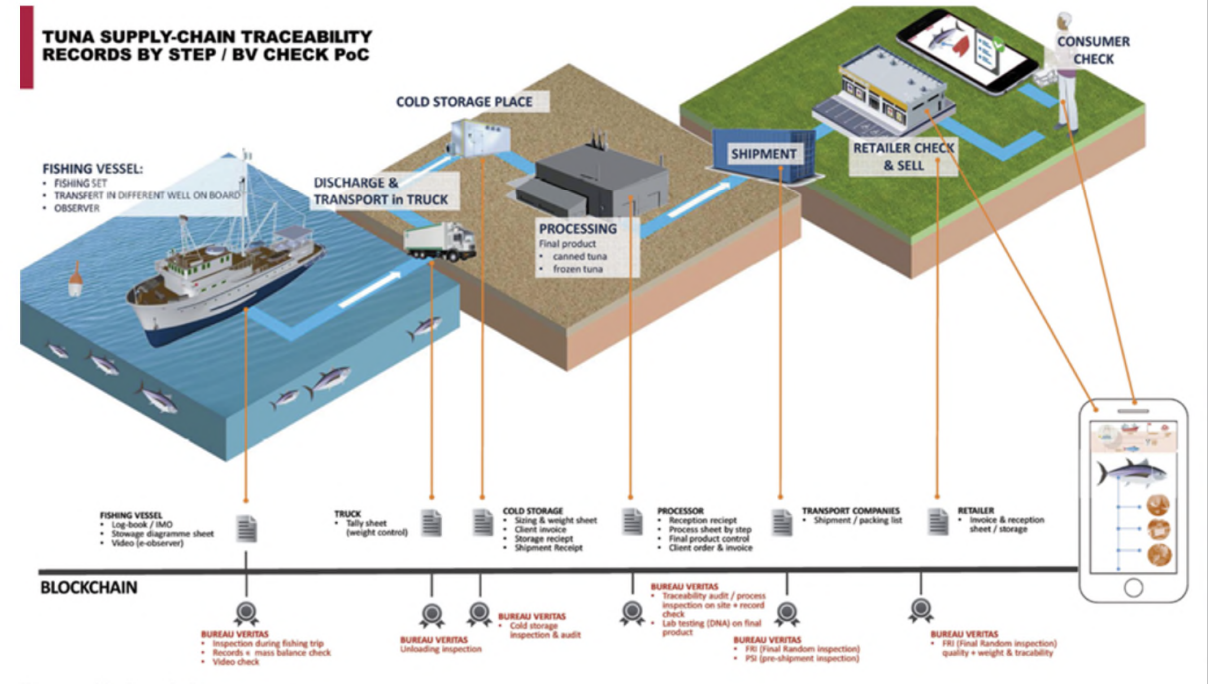

Raja Ramachandran and Phil Harris met when they were both working on Wall Street, in 2005 after Citigroup Inc. acquired electronic trading company Lava Trading. The pair remained friends for more than a decade, and decided to leave finance to start Ripe.io, which uses blockchain in agriculture, and has big aspirations to weave it through the food supply chain.
